

The Many Hats of Women in Bio

JUNE 5, 2018
PODCAST

Women in Bio (WIB) is an organization with 12 Chapters in the US and one in Montreal. Its mission is simple: encourage women to choose the life sciences as a career whether it is to be involved as a scientist, or one of the many other opportunities in biotech from marketing to leading from the C-Suite.

Genome Alberta speaks at the 2018 BIO Convention with three representatives from WIB, including WilmerHale Counsel Lily Wound, to talk about the organization and one of its branches, Young Women in Bio (YWIB). The conversation included many topics, such as the many hats that women working in the life sciences have to wear.
