

TiE-Boston: Semiconductor and Manufacturing Business Forum

2008-04-16

Wireless technology is not only being used for communications but is starting to touch almost all aspects of our daily lives. Wii's wireless motion sensors, RFID tags etc. are just some of the examples that will unwire devices in the future. Emerging technologies such as wireless power transfer hold even more promise, and could eliminate wires altogether.

In this upcoming event from TIE Semiconductor and Manufacturing Business forum, a panel of experts will review the state of the wire'less' industry today. You'll hear about how the new wireless technologies are affecting the industry, and what opportunities are being created for entrepreneurs.

WilmerHale is a sponsor of this event.
