## Xconomy Forum: The State of Cybersecurity

BOSTON, MA

In today's tech landscape, hackers have the means and economic incentive to threaten organizations in every industry. Techniques from ransomware to rogue devices can be used to manipulate or access bank accounts, health records, corporate software, and critical infrastructure. Now a growing cluster of cybersecurity companies is working with customers, including governments, to combat the latest threats. But how can companies of all sizes better collaborate to secure and share data while also building their own businesses? What are the biggest opportunities for investors and executives? And how should security companies and their customers plan for the long haul?

Xconomy is convening a Who's Who of technology and business leaders from Boston and beyond to address questions about data security, IT strategy, the regulatory landscape, and much more.
